

Raised Bed Assembly

1) Slot side panels into fronts and backs. Once through slot, place a pin through the inside hole in lug. Use hammer to knock these into place. Repeat for all lugs

2) For additional beds slide lugs through two sides and use outside hole for pins

Note: We advise that you dig a 20mm track for raised beds to sit in for added stability and stop bowing of plastic. We also have a stobs available to prevent sides bowing.

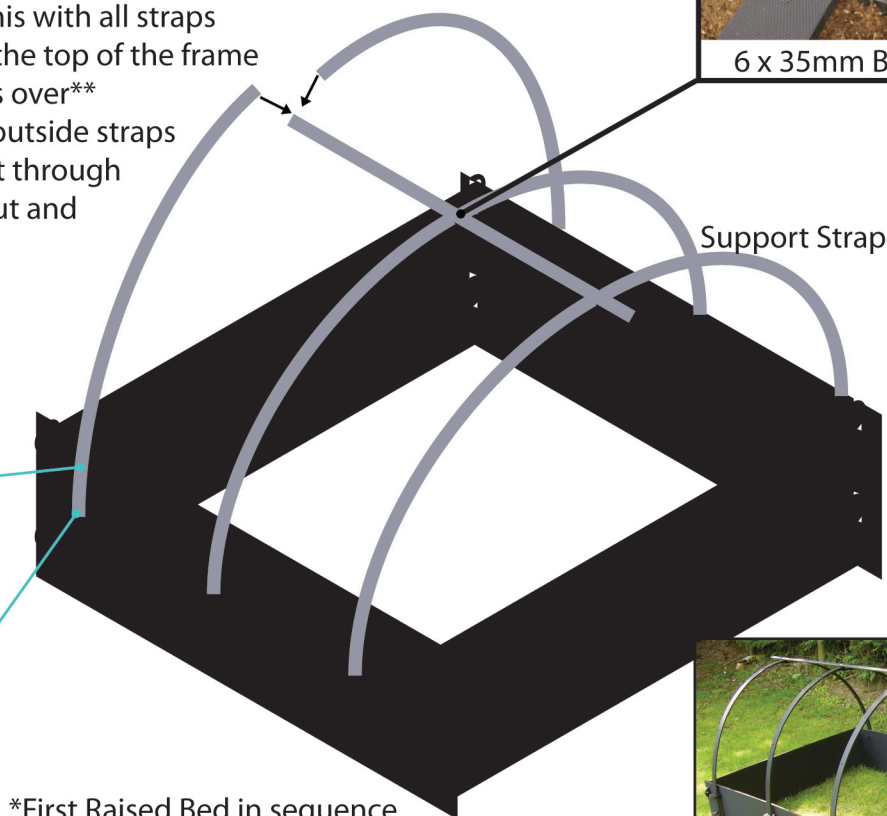

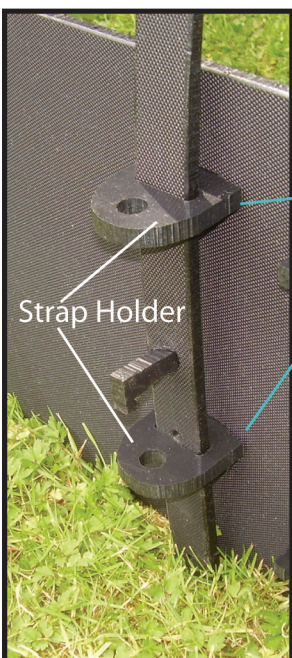

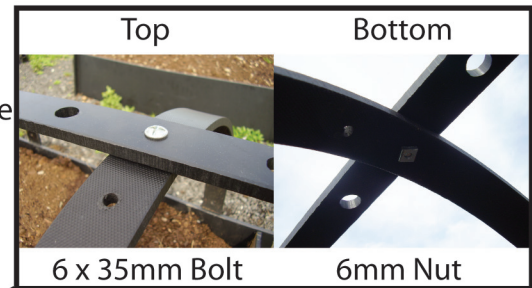

Assembling Raised Bed Frames

1) Slide support strap holders into slots on bed front. Once through to inside of bed hammer in a pin to secure holder in place

2) Once holders are in place feed a support strap down through upper and lower holders. Repeat this with all straps

3) Use another strap as the top of the frame and bend outside straps over**

4) Align holes at top of outside straps and top strap, place bolt through all three straps, screw nut and tighten

*First Raised Bed in sequence should have 3 sets of straps going over bed. Each bed thereafter only requires 2 sets of straps over the bed.
